

Mohamed Ibrahim H

SOC Analyst · Cybersecurity Engineer · Blue Team

ibrahim.cybrx@gmail.com | Tamil Nadu, India | github.com/ibu-cyx0 | tryhackme.com/p/IbrahimCyb3r4

PROFILE

\$ Recent B.E. Cybersecurity Engineering graduate from Paavai Engineering College, Namakkal, pursuing SOC Analyst and Blue Team roles in Chennai and Bangalore. Passionate about hands-on defensive security, log analysis and threat detection – building labs, breaking them, and instrumenting them until nothing moves unseen.

EDUCATION

B.E. Cybersecurity Engineering

2021 – 2025

Paavai Engineering College, Namakkal, Tamil Nadu – status: exit code 0

EXPERIENCE

SOC Analyst Intern – The Mind IT

Jan 2026 – Apr 2026

\$ Hands-on SOC operations: alert triage, continuous log monitoring across network and endpoint sources, and incident response support alongside senior analysts.

tags: [alert-triage](#) [log-monitoring](#) [incident-response](#)

CERTIFICATIONS

- Certified SOC Analyst (CSA) EC-Council
- Ethical Hacking Essentials (EHE) EC-Council
- Splunk Core Certified User Splunk
- CyberOps Associate Cisco

SKILLS

SIEM & Monitoring: splunk, log-analysis, alert-triage
Network Security: pfsense, wireshark, ids/ips
Threat Intelligence: alienvault-otx, abuseipdb, urlhaus
Frameworks: nist-sp-800-207, mitre-att&ck, zero-trust
Tools: wazuh, cyberops-stack, nmap
Soft Skills: incident-response, sec-awareness-training, 150+ student seminar

PROJECTS

CTI Automation Platform

github.com/ibu-cyx0/CTI-Automation-Platform

\$ Threat intel pipeline pulling indicators from AlienVault OTX, AbuseIPDB and URLhaus into Splunk. Automated IOC ingestion on schedule, normalisation into a lookup layer, and correlation searches raising alerts when internal telemetry matches known-bad infrastructure. Cuts manual enrichment time during triage.

stack: [python](#) · [splunk](#) · [otx-api](#) · [abuseipdb](#) · [urlhaus](#)

AI-Powered SOC Alert Triage

github.com/ibu-cyx0/AI-Powered-Threat-Detection-Engine

\$ Random Forest model prioritising SOC alerts to reduce analyst fatigue. Trained on labelled alert data with feature engineering across source reputation, asset criticality and alert frequency; outputs a priority score so analysts work the queue by real risk.

stack: [python](#) · [scikit-learn](#) · [random-forest](#) · [pandas](#)

Zero Trust Network Simulation Lab

github.com/ibu-cyx0/Zero-Trust-Network-Simulation-Lab

\$ Full Zero Trust architecture on pfSense and Wazuh following NIST SP 800-207. Segmented lab with policy enforcement points, identity-aware access rules, continuous monitoring via Wazuh agents, and logging pipelines validating the NIST tenets against simulated attacks.

stack: [pfsense](#) · [wazuh](#) · [nist-800-207](#) · [vlan-segmentation](#)
